... we had
weeks of not enough rain, but with all the adverse weather
we harvested a fine crop of clean, healthy bulbs.

Inspection No. 453.

Our bulbs were inspected while growing, also in
storage and have passed with an O. K.

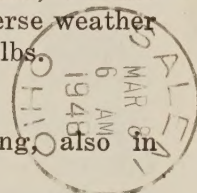

We have added some new ones we have tried and
found them good for our locality.

ORDER EARLY—Please send order early to avoid
disappointment, as many varieties will be sold out early.
We ship as soon as weather permits.

PRICES AND TERMS—Full remittance should ac-
company all orders. All orders for less than \$2.00, please
add 15c to cover postage, all orders over \$2.00 will be
sent postpaid if taken from the retail list.

We will ship C. O. D. on request when 25 per cent
of the amount is sent with the order.

5 bulbs at the 10 rate, for instance: 10 bulbs for
75c, 5 may be had for 38c.

MIXED GLADIOLUS BULBS

This mixture is from named varieties (not labeled) A good collection. Most all colors and shades. L 10-60c, 50-\$2.75. 100-\$4.50; M 10-40c, 50-\$1.50, 100-\$2.25.

We add extras to each order, and in case of a drop in price of a variety you receive extra bulbs of that variety.

BULB SIZES—Large bulbs are 1¼ inch and up. These are your best blooms for size and some earlier as a rule, and are designated by the letter "L".

Medium bulbs ¾ to 1¼ inch. This size will give good bloom but not quite as early to bloom. Medium size is designated by the letter "M".

Small bulbs are ⅜ to ¾ inch. This size is designated by the letter "S".

Plant small bulbs and bulblets as early as is possible to get them into the ground to give them a longer growing season, and keep weeds down. you will be surprised at your returns.

D.D.T. is very good instead of the Naphthalene flakes. When you get ready to store your bulbs, give them a light dusting of 5% D.D.T. This will eliminate any danger of thrips feeding on your bulbs during storage period.

Golds are easy to grow and anyone—even a beginner—can grow the finest show flowers.

GLAD CULTURE IN A NUTSHELL

1. **Planting Time**—April 1 to June 25.
2. **Site**—In full sunshine, well drained soil. Keep away from buildings, trees and shrubbery, stir soil often.
3. **Planting Depth**—Bulblets, 2 inches, small size 3 inches, medium 3 to 4 inches, large 4 to 6 inches. Rows—2 to 3 feet apart.
4. **In Cutting Flowers**, leave at least 4 leaves intact.
5. **Lysol Dip**—1 tablespoon lysol; 1 gallon water. Soak bulbs 4 to 6 hours immediately before planting.
6. **Thrip Spray**—2 ozs. tartar Emetic; 2 ozs. brown sugar or corn syrup; 3 gallons water. Mix well. Spray weekly after third leaf of foliage appears until bloom starts.
7. **Dig bulbs** about 6 weeks after varieties are done blooming usually in October. Store in coolest part of basement after bulbs have been dried thoroughly in shade.

Naphthalene Flakes—scattered over your bulbs in storage and cover with paper for 3 or 4 weeks then sift off. Do not put flakes on after roots start to form or while bulbs are moist as it will burn. This will kill all thrip that may have been on the bulbs.
